

Appl. No. 10/761,603

Amend. dated May 9, 2005

Reply to Office action of 02/16/2005

Amendments to the Specification:

Please replace the paragraph beginning at page 5, line 12, with the following rewritten paragraph:

- 5 -- The insulation base 40 has a connection slot 41 into which a circuit board may be inserted frontward. The connection slot 41 has an upper edge formed with, from outside to inside, a slant first surface 42 and a horizontal second surface 43, and a lower edge formed with, from outside to inside, a horizontal third surface 44 and a fourth surface 45 that is slant in correspondence with the first surface 42. An
- 10 inner side of the connection slot 41 is formed with a vertical fifth surface 46. A card-ejecting slant surface 47 is formed between the fifth surface 46 and the second surface 43, and a vertical sixth surface 48 is formed between the card-ejecting slant surface 47 and the second surface 43. The upper edge of the connection slot 41 is formed with a plurality of spaced first spacers 49 so as to
- 15 form a plurality of spaced first terminal receiving slots 50. The lower edge is formed with a plurality of spaced second spacers 51 so as to form a plurality of spaced second terminal receiving slots 52. --
